

# MEDIFORM

## SECURE CLOUD-BASED PATIENT INTAKE PROCESSING

### 1. Easy to use Patient Portal

This can be accessed in advance of their appointment via medical practice website, or at the time of the appointment on their own mobile device or provided tablet.

- Forms are customized to the practice and can include dynamic questions that expand based upon previous answer.
- Static forms like Financial Policy, HIPPA statement and other office forms can be presented for signature as part of a packet.

### 2. Instantaneous Upload to our Secure Cloud Platform

- Office staff can view the submitted form with images sent by patient. Information is encrypted for patient privacy.
- Human error and processing time is greatly reduced, thereby increasing profitability.

### 3. Real-time benefits verification

- While filling out the patient form we collect the member information as data inputs.
- Benefits and Eligibility verification happens real-time when the form is submitted via online portal.
- Instantly verify patient coverage and access co-insurance, copay, deductible and other plan details.
- Access over 700 health insurance payer connections. 93% of the insured U.S. population uses one of the plans we can verify.
- Leverage healthcare blockchain technology to ensure secure and compliant processing.

### 4. Practice software integration

- No keying of the information collected via the online forms and benefits verification
- The MediForm integrations allow for direct data and image handoff real-time or once your staff verifies the accuracy of the information

### 5. Efficiencies Gained

- Currently practices tell us it takes them 15-30 minutes per patient they enter information for from paper forms.
- Eligibility and benefits verification can take office staff 10 minutes to 3 hours per patient
